High Voltage Multi-Range DC Power Supplies
MR Series

The MR Series of high voltage multi-range DC power supplies include 250 V, 500 V, and 1000 V models producing 5 kW of clean output power in a compact 2U form factor. This series is suited for both bench use and automated test system applications. For benchtop applications, this series offers an intuitive user interface for list mode programming and slew rate adjustments directly from the front panel. Operating software is provided for test sequence generation and data logging without the need to write source code.

Integrators will benefit from fast command response times, excellent regulation, and low noise characteristics. In addition, this series supports USB, GPIB, LXI compliant LAN, and analog interfaces for remote control and programming. Up to 30 power supplies can be daisy-chained and controlled from one PC, or connect multiple power supplies in parallel for increased output power.

The MR Series includes a built-in SAS (solar array simulator) function to generate I-V curves from the front panel. The optional SAS software allows users to simulate various weather conditions and consistently reproduce I-V curves while monitoring MPPT efficiency data.

System Integration

The MR Series offers many features for ATE system and integration applications.

Automation:
- LXI simplifies integration and system development
- Fast command response time (10 ms)
- LabVIEW™, IVI-C, and IVI.NET drivers included
- List mode programming
- Built-in web server

Integration:
- 2U form factor saves rack space
- Simple single-phase AC input
- Parallel operation
- Standard USB (USBTMC-compliant), RS232, GPIB and LXI compliant LAN interfaces
- Galvanically isolated analog control and monitoring interface
- cTUVus certification mark
- Comprehensive protection features for the power supply and DUT
- Thermostatically-controlled fans help minimize noise
- Optional rack-mount kit available

System Integration

The MR Series offers many features for ATE system and integration applications.

Automation:
- LXI simplifies integration and system development
- Fast command response time (10 ms)
- LabVIEW™, IVI-C, and IVI.NET drivers included
- List mode programming
- Built-in web server

Integration:
- 2U form factor saves rack space

- Parallel operation
- Standard USB (USBTMC-compliant), RS232, GPIB and LXI compliant LAN interfaces
- Galvanically isolated analog control and monitoring interface
- cTUVus certification mark
- Comprehensive protection features for the power supply and DUT
- Thermostatically-controlled fans help minimize noise
- Optional rack-mount kit available

Features and benefits

- Output up to 1000 V or 80 A
- Multi-ranging operation, capable of replacing multiple fixed range power supplies
- Compact 2U form factor
- Standard USB (USBTMC-compliant), RS232, GPIB and LXI compliant LAN interfaces
- Galvanically isolated analog control and monitoring interface
- Protection features: OVP, OCP, OPP, OTP, foldback protection mode, and key-lock function
- Adjustable voltage and current slope (rise and fall time)
- List mode: 10 user-defined setups with up to 100 programmable steps each
- Built-in SAS function for storage of up to 101 I-V curves with Voc, Isc, Vmp, Imp, parameters and 4096-point table
- Remote Sense to compensate for voltage drop
- Master/Slave mode operation provides up to 50 kW with 10 units connected in parallel
- Control up to 30 power supplies from one PC
- Soft panel software for remote control, test sequence generation, and data logging included
- cTUVus certification mark fulfills CSA and UL safety standards
High Voltage Multi-Range DC Power Supplies
MR Series

Front panel

Bright VFD display
The MR Series displays both measured output values and the set parameters simultaneously.

Numerical Keypad
Input values directly.

Rotary control knob
Precisely increment and decrement input values.

Thermostatically controlled fans
Front to rear airflow for efficient cooling in high density rack environments.

Cursor keys
Quick voltage and current adjustment on a digit-by-digit basis.

Rear panel

USB interface
Set to USBTMC or USBVCP (Virtual COM Port).

External analog interface
Monitor or control the output using an external voltage or resistance source.

LAN interface
GPIB interface

Output terminals
Remote sense terminal

RS232 interface
Master/Slave communication ports
Connect multiple power supplies for more power.

Single-phase AC line input
This series features a single-phase AC mains (200 VAC to 240 VAC nominal) connection which is easier to wire and more commonly available than 3-phase AC outlets.
Flexible configuration and performance

Multi-range operation
Traditional power supplies with rectangular output characteristics only deliver maximum output power at one voltage/current point. Multi-range functionality broadens the maximum power output from one point to a range illustrated by the curves shown in the figure below. This flexibility means multi-range power supplies are capable of replacing multiple fixed range power supplies.

Device protection
To protect your DUT, the MR Series provides overvoltage (OVP), overcurrent (OCP), overpower (OPP), and overtemperature (OTP) protection. A fault will trigger an alarm and disable the output. Similarly, with constant voltage-to-constant current (CV-to-CC) or constant current-to-constant voltage (CC-to-CV) foldback protection mode activated, the output will be disabled if load changes force the supply to transition between the two operating modes.

Master/Slave operation
For more power, models with the same rating can be connected in parallel and operate in master/slave mode. The RJ45 ports are used for communication between the master and slave(s). Once configured, the master will automatically search for and detect slave units and display the voltage and current of the complete system.

List mode
This feature allows users to program a list of steps to the power supply’s internal memory and execute them directly from the front panel. A total of 100 steps can be allocated to each internal memory location, for up to 10 locations. Each step setting includes voltage, current, duration and output status. List mode sequences can also be programmed remotely through the USB, RS232, GPIB, or LAN interfaces using SCPI commands or with the included application software.

Multi-unit control
Up to 50 units can be daisy chained and controlled from one master unit through the USB, GPIB, or LAN interface.

Accessories

- AC input power cord (standard)
- Rack mount kit model RKPVS (optional)
Remote control and programming

Adjustable slew rate and output timer
Slew rate setting allows users to control the voltage and current slope (rise and fall times). The timer-controlled output can be set from 1 second to 255 hours.

Analog programming and monitoring
The galvanically isolated analog interface can be used to monitor voltage, current, regulation mode (CV or CC), or to indicate fault conditions. In addition to front panel and PC interface control, the MR Series can be controlled from zero to full scale by an external voltage signal or resistor (0 to 5 V / 5 kΩ or 0 to 10 V / 10 kΩ selectable).

Web server interface
The MR Series provides a built-in web server that allows users to configure, control, and monitor the basic settings of the power supply, using a web browser on a computer connected to the same local area network.

Convenient front panel guided calibration
Using a 5 ½ digit multimeter, voltage and current parameters can be conveniently calibrated from the front panel via the calibration menu.

Application software and integration
PC software is provided for front panel emulation, generating and executing test sequences, or logging measurement data without the need to write source code.

- Log voltage, current, and power values as well as time stamp, CV/CC, and output status.
- Save and load list files to/from the power supply’s internal memory.
- Create an unlimited number of external list files to be executed from PC memory. Save and recall list files to/from the PC.
Solar Array Simulation (SAS) Software Option

Solar inverter designers need to verify their inverter is capable of delivering the maximum power available from solar modules. The I-V curve of solar cells can be influenced by various weather conditions such as a cloudy day. Combined with the SAS application software, MR users can easily simulate the I-V curve of different arrays under various irradiance conditions while measuring and validating the effectiveness of the inverter’s MPPT algorithm.

Features

- Variety of input parameters (Voc, Isc, Vmp, Imp, and temperature coefficient)
- Monitors and logs real-time voltage, current, power, MPPT efficiency, and average MPPT efficiency
- Simulate I-V curve under different weather conditions during a day
- User-definable irradiance profile
- Generate a custom I-V curve with up to 4,096 data points
- Test to EN50530, NB/T32004, Sandia lab standards

PV Simulation

Solar arrays consist of multiple solar cells characterized by a complex voltage and current profile that is represented in an I-V curve.

Generate custom I-V curves using Excel or Notepad to create a 4,096 point voltage and current table. Use the SAS software to download the I-V curve table to the power supply’s internal memory for output.

Automatically generate PV and I-V curves by specifying open circuit voltage (Voc), short circuit current (Isc), maximum power voltage (Vmp), and maximum power current (Imp) along with temperature coefficient (β).

Shadow Simulation

Use the shadow simulation mode to test solar arrays under different weather conditions. Adjust cloud intensity, cloud direction, and timing parameters. Resulting PV and I-V curves are automatically generated along with MPPT efficiency data.
# Specifications

Note: All specifications apply to the unit after a temperature stabilization time of 15 minutes over an ambient temperature range of 23 °C ± 5 °C. Specifications are valid for single unit operation only.

**Regulatory Compliance**

- **Safety**
  - Low Voltage Directive (LVD) 2014/35/EU, EN61010-1:2010, cTUVus certification mark (6)
  - fulfills US (UL 61010-1:2012) and Canadian (CAN/CSA-C22.2 NO. 61010-1-12) safety standards

- **Electromagnetic Compatibility**
  - EMC Directive 2014/30/EU, EN61326-1:2013

  (3) Time for output voltage to recover within 1.5% of its rated output for a load change 50-100% of rated output current.
  (4) Typical time for output to begin to change following receipt of command data.
  (5) At nominal line and max load.
  (6) Tested and certified by a Nationally Recognized Testing Laboratory (NRTL), accredited by OSHA.
About B&K Precision

For more than 60 years, B&K Precision has provided reliable and value-priced test and measurement instruments worldwide.

Our headquarters in Yorba Linda, California houses our administrative and executive functions as well as sales and marketing, design, service, and repair. Our European customers are most familiar with B&K through our French subsidiary, Sefram. Engineers in Asia know us through our B+K Precision Taiwan operation. Our B&K Brasil office supports our expanding customer base in Brazil and other South American countries. The independent service center in Singapore services customers in Singapore, Malaysia, Vietnam, and Indonesia.

Quality Management System

B&K Precision Corporation is an ISO9001 registered company employing traceable quality management practices for all processes including product development, service, and calibration.

ISO9001:2015

Certification body NSF-ISR
Certificate number 6Z241-IS8
