Model: 4007B, 4013B

DDS Function Generator

USER MANUAL
Safety Summary

The following safety precautions apply to both operating and maintenance personnel and must be observed during all phases of operation, service, and repair of this instrument. Before applying power, follow the installation instructions and become familiar with the operating instructions for this instrument.

If this device is damaged or something is missing, contact the place of purchase immediately.

This manual contains information and warnings that must be followed to ensure safe operation as well as maintain the meter in a safe condition.

GROUND THE INSTRUMENT

To minimize shock hazard, the instrument chassis and cabinet must be connected to an electrical ground. This instrument is grounded through the ground conductor of the supplied, three-conductor ac power cable. The power cable must be plugged into an approved three-conductor electrical outlet. Do not alter the ground connection. Without the protective ground connection, all accessible conductive parts (including control knobs) can render an electric shock. The power jack and mating plug of the power cable must meet IEC safety standards.

DO NOT OPERATE IN AN EXPLOSIVE ATMOSPHERE

Do not operate the instrument in the presence of flammable gases or fumes. Operation of any electrical instrument in such an environment constitutes a definite safety hazard.

KEEP AWAY FROM LIVE CIRCUITS

Instrument covers must not be removed by operating personnel. Component replacement and internal adjustments must be made by qualified maintenance
personnel. Disconnect the power cord before removing the instrument covers and replacing components.
Under certain conditions, even with the power cable removed, dangerous voltages may exist. To avoid injuries, always disconnect power and discharge circuits before touching them.

**DO NOT SERVICE OR ADJUST ALONE**

Do not attempt any internal service or adjustment unless another person, capable of rendering first aid and resuscitation, is present.

**DO NOT SUBSTITUTE PARTS OR MODIFY THE INSTRUMENT**

Do not install substitute parts or perform any unauthorized modifications to this instrument. Return the instrument to B&K Precision for service and repair to ensure that safety features are maintained.

**WARNINGS AND CAUTIONS**

A **WARNING** statement calls attention to an operating procedure, practice, or condition, which, if not followed correctly, could result in injury or death to personnel.

A **CAUTION** statement calls attention to an operating procedure, practice, or condition, which, if not followed correctly, could result in damage to or destruction of part or all of the product.

**WARNING:** Do not alter the ground connection. Without the protective ground connection, all accessible conductive parts (including control knobs) can render an electric shock. The power jack and mating plug of the power cable meet IEC safety standards.
WARNING: To avoid electrical shock hazard, disconnect power cord before removing covers. Refer servicing to qualified personnel.

CAUTION: Before connecting the line cord to the AC mains, check the rear panel AC line voltage indicator. Applying a line voltage other than the indicated voltage can destroy the AC line fuses. For continued fire protection, replace fuses only with those of the specified voltage and current ratings.

CAUTION: This product uses components which can be damaged by electro-static discharge (ESD). To avoid damage, be sure to follow proper procedures for handling, storing and transporting parts and subassemblies which contain ESD-sensitive components.
Compliance Statements
Disposal of Old Electrical & Electronic Equipment
(Applicable in the European Union and other European countries with separate collection systems)

This product is subject to Directive 2002/96/EC of the European Parliament and the Council of the European Union on waste electrical and electronic equipment (WEEE), and in jurisdictions adopting that Directive, is marked as being put on the market after August 13, 2005, and should not be disposed of as unsorted municipal waste. Please utilize your local WEEE collection facilities in the disposition of this product and otherwise observe all applicable requirements.

CE Declaration of Conformity

The model 4007B and 4013B meet the requirements of 2006/95/EC Low Voltage Directive and 2004/108/EC Electromagnet Compatibility Directive with the following standards.

Low Voltage Directive
- EN61010-1:2010
  Safety requirements for electrical equipment for measurement, control, and laboratory use-Part 1

EMC Directive
- EN61326-1:2006
- EN61000-3-2 (2006+A2:2009)
- EN61000-3-3 (2008)

1 Introduction

1.1 Introduction

This manual contains information required to operate the B&K Precision model 4007B and 4013B DDS Function Generators. This section covers the instrument’s general description, specifications and characteristics.

1.2 Description

The 4007B and 4013B are versatile high performance function generators. Implemented using a DDS (direct digital synthesis) architecture, these instruments generate stable and precise sine, square, and triangle waveforms. Both models also provide linear and logarithmic sweep for users needing sweep capability. An auxiliary TTL output at the generator’s frequency is available to synchronize external devices. Up to 9 front panel settings can be saved to memory storage.

2 Installation

2.1 Introduction

This section contains installation information, power requirements, initial inspection and signal connections for the 4007B and 4013B signal generators.

2.2 Package Contents

Please inspect the instrument mechanically and electrically upon receiving it. Unpack all items from the shipping carton, and check for any obvious signs of physical damage that may have occurred during transportation. Report any damage to the shipping agent immediately. Save the original packing carton for possible future reshipment. Every generator is shipped with the following contents:

- 4007B / 4013B DDS function generator
- AC Power Cord
- Certificate of Calibration

Verify that all items above are included in the shipping container. If anything is missing, please contact B&K Precision.
2.4 Instrument Mounting

The 4007B and 4013B Function Generators are intended for bench use. The instrument includes a front feet tilt mechanism for optimum panel viewing angle. The instrument does not require special cooling when operated within conventional temperature limits. It may be installed in a closed rack or test station if proper air flow can assure removing about 15 W of power dissipation.

2.5 Power Requirements

The 4007B and 4013B can be operated from any source of 90V to 264V AC, frequency from 48Hz to 66Hz. The maximum power consumption is 25 VA. Use a slow blow fuse of 1A, UL/CSA approved as indicated on the rear panel of the instrument.

The instrument power fuse is located in the AC input plug. To access the fuse, first disconnect the power cord and then remove the fuse cartridge.

2.6 Fuse Replacement

There is a 1A, 250V rated slow blow fuse at the AC input. Should the fuse ever get blown, follow the steps below to replace:
1. Locate the fuse box next to the AC input connector in the rear panel.
2. With a small flat blade screwdriver, insert into the fuse box slit to pull and slide out the fuse box as indicated below.
3. Check and replace fuse if necessary.

![Fuse box diagram]

---

### 2.7 Grounding Requirements

For the safety of operating personnel, the instrument must be grounded. The central pin on the AC plug grounds the instrument when properly connected to the ground wire and plugged into proper receptacle.

**WARNING**

TO AVOID PERSONAL INJURY DUE TO SHOCK, THE THIRD WIRE EARTH GROUND MUST BE CONTINUOUS TO THE POWER OUTLET. BEFORE CONNECTION TO THE POWER OUTLET, EXAMINE ALL CABLES AND CONNECTIONS BETWEEN THE
UNIT AND THE FACILITY POWER FOR A CONTINUOUS EARTH GROUND PATH. THE POWER CABLE MUST MEET IEC SAFETY STANDARDS.

2.8 Signal Connections

Use RG58U 50Ω or equivalent coaxial cables for all input and output signals to and from the instrument.
3 Operating Instructions

3.1 General Description

This section describes the displays, controls and connectors of the function generator. All controls for the instrument local operation are located on the front panel.

1  Power Button  Power ON/OFF
2  LCD Display
3  Function Keys  F1 – F4 function keys
4  **Waveform Buttons**  
   Select Sine, Ramp/Triangle, Square waveform shape

5  **Rotary Knob**

6  **Cursor Keys**

7  **Output ON/OFF**  
   Enable/Disable Output

8  **SWEEP Button**  
   Selects Sweep function menu

9  **UTIL Button**  
   Utility menu

10 **Units Keys**

11 **Numeric Keypad**

### 3.2 Display Window

The function generator has a graphic LCD display that can display up to 124 x 32 dots. When you power-on the unit sine waveform is selected and current settings appear in the display. The bottom displays a menu (selectable with function keys) that corresponds to the function, parameter or mode display selected.

### 3.3 Front Panel Controls

The front-panel controls select, display, and change parameter, function, and mode settings.
Use the numerical keypad, rotary input knob and the cursor movement keys to enter data into the waveform generator.

To change a setting:
1. Press the key that leads to the item to change.
2. Move cursor using cursor keys to the appropriate position in the numeric field (if applicable).
3. Use the rotary input or the numerical keyboard to change the value of the displayed item. Changes take effect immediately.

### 3.4 Connectors

The function generator has two BNC connectors on the front panel where you can connect coaxial cables. These coaxial cables serve as carrier lines for output signals delivered from the function generator.

**Output**
Use this connector to transfer the main output signal from the function generator.

**Sync Out**
Use this connector to output a positive TTL sync pulse generated at each waveform cycle.

### 3.5 Output Connections

The waveform generator output circuits operate as a 50 Ω voltage source working into a 50 Ω load. At higher frequencies, non terminated or improperly terminated output causes aberrations on the output waveform. In addition, loads less than 50 Ω reduce the waveform amplitude, while loads more than 50 Ω increase waveform amplitude. Excessive distortion or aberrations caused by improper termination are less noticeable at lower frequencies,
especially with sine and triangle waveforms. To ensure waveform integrity, follow these precautions:
1. Use good quality 50 Ω coaxial cable and connectors.
2. Make all connections tight and as short as possible.
3. Use good quality attenuators if it is necessary to reduce waveform amplitudes applied to sensitive circuits.
4. Use termination or impedance-matching devices to avoid reflections.
5. Ensure that attenuators and terminations have adequate power handling capabilities.
If there is a DC voltage across the output load, use a coupling capacitor in series with the load. The time constant of the coupling capacitor and load must be long enough to maintain pulse flatness.

**Impedance Matching**

If the waveform generator is driving a high impedance, such as a 1 MΩ input impedance (paralleled by a stated capacitance) of an oscilloscope vertical input, connect the transmission line to a 50 Ω attenuator, a 50 Ω termination and to the oscilloscope input. The attenuator isolates the input capacitance of the device and terminates the waveform generator properly.

**3.6 MENU Keys**

These keys select the main menus for displaying or changing a parameter, function or mode.
3.6.1 WAVEFORM Keys

The keys select the waveform output and displays the waveform parameter menu (frequency, amplitude and offset).

![Sine Menu]

**F1: FREQ** – *(Frequency)* Selects and displays the frequency. Change the frequency setting using the cursor keys, rotary knob or numerical keys.

**F2: AMPL** – *(Amplitude)* Selects and displays the Amplitude. Change the amplitude setting using the cursor keys, rotary knob or numerical keys.

**F3: OFST** – *(Offset)* Selects and displays the Offset parameter. Change the offset by using the cursor keys, rotary dial or numerical keys. If a certain setting cannot be produced, the waveform generator will display a “Setting Conflict” message.

**Amplitude and Offset Interaction:** Amplitude and offset settings interact and are bound by hardware restrictions. In order to obtain the desired waveform, the following amplitude and offset hardware limitations must be considered:
The offset voltage has three ranges as follows:

<table>
<thead>
<tr>
<th>Output Voltage Range</th>
<th>Constraints of Amplitude + Offset</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.01 volt to 10.00 volts</td>
<td>((V_{p-p})/2 +</td>
</tr>
<tr>
<td>0.101 volt to 1 volt</td>
<td>((V_{p-p})/2 +</td>
</tr>
<tr>
<td>0.010 volt to 0.100 volt</td>
<td>((V_{p-p})/2 +</td>
</tr>
</tbody>
</table>

**F4:SYM – (Symmetry)** When the Square waveform is selected, the SYMMETRY (Duty cycle) parameter is available. Change the duty cycle (square) by using the cursor keys, rotary dial or numerical keys. If a certain setting cannot be produced, the waveform generator will display a warning message.
3.6.2 UTILITY Key

**F1: RECALL** – Recalls a previously stored front-panel setup from the selected buffer. Change the buffer number by using the rotary input knob. Valid storage buffer numbers are from 1 to 9. Buffer 0 is the factory default setup.

**F2: STORE** – Stores the current front-panel setup to the specified storage buffer. Change the buffer number by using the data keys or the rotary input knob. Valid storage buffer numbers range from 1 to 9.

**F3: OUT-ON** – Selects the OUTPUT state from a power-up. Select ON to enable or OFF to disable the output from a power-up.

**F4: INTENSITY** – Adjusts the intensity of the LCD screen. Valid range is 1 – 9; 9 giving the highest intensity and contrast.

3.6.3 SWEEP Key

Selects the Sweep Mode and allows entering sweep parameters Sweep Start, Sweep Stop and Sweep Rate.
To select the sweep mode, press SWEEP, then press the function key that corresponds to the desired Sweep menu option, as shown:

F1: ON/OFF – Enables/disables the sweep function. Select between Sweep ON or OFF.

F2: LIN – Selects the Linear sweep shape.

F3: LOG – Selects the Logarithmic sweep shape.

F4: SET – Defines the Sweep Start and Stop frequencies.

3.7 ON Key

Use this key to control the main output signal. When the output is active, the key will lit. By default, this will be ON (enabled) from a power-up. This can be changed by changing the OUT-ON settings from the utility menu.
3.8 Cursor Keys

Use these keys to move the cursor (when visible) either left or right. They are used in conjunction with the rotary input knob to set the step size of the rotary input knob.

3.9 Rotary Input Knob

Use this knob to increase and decrease numeric values. The cursor indicates the low-order position of the displayed value which changes when you rotate the knob (for straight numeric entries only). For other types of data, the whole value changes when you rotate the knob.

3.10 Power-On Settings

Table 3-2 lists the factory default settings or selected after RECALL 0.

<table>

</tbody>
</table>
3.11 Memory

The waveform generator uses non-volatile flash memory for storing the front panel settings. Up to 9 front panel settings can be stored (not including default settings).

3.12 Displaying Errors

The waveform generator displays error messages when front-panel settings are either invalid or may produce unexpected results.

Table 2 – Error Messages

3.13 Quick Start

This section explains how to generate various waveforms and modify the output waveform.

* Generating a waveform output
* Modifying waveform output
* Storing and recalling a waveform generator setup

3.13.1 Selecting a Standard Waveform

You can select several standard waveforms as: sine, triangle, square. Creating a standard waveform requires selecting the waveform type, parameters and their settings that define the waveform.

Generating a standard waveform requires the following:

* Selecting the waveform
* Setting the output frequency
* Setting the output amplitude and offset

3.13.2 Setting the Output

To set the output channel, press the Output ON key. The key will lit indicating the output is enabled.

3.13.3 Using Voltage Offset

Through the offset parameter you can add a positive or negative DC level to the output waveform.
To set voltage offset:
1. Select a waveform to display its menu.
2. Press F3:OFST to display the offset setting.
3. Use the rotary input knob or the numerical keys to set the voltage offset.

To turn the voltage offset OFF, repeat the steps above, but set the offset voltage level to 0.

3.13.4 Storing and Recalling a Waveform Generator Setup

You can store up to 9 front-panel setups inside the internal non-volatile flash memory. When you recall a stored setup, the front-panel settings change to match the settings in the stored setup.

Storing Setups
To store the front-panel setup:
1. Press UTILITY to display the menu.
2. Press F2:STORE to select the Store mode.
3. Use the rotary input knob to select a buffer number. Valid buffer numbers range from 1 to 9.
Buffer 0 is a read-only buffer that contains the default setup/power-on settings.
The function generator will overwrite and store settings into a buffer that had settings previously stored inside without a warning.
Recalling Setups
To recall stored front-panel setup:
   1. Press UTILITY to display the menu.
   2. Press F1:RECALL to select the Recall mode.
   3. Use the rotary input knob to select a buffer number. Valid buffers numbers range from 0 to 9. Buffer 0 is a read-only buffer that contains the default power-on setup.
**SERVICE INFORMATION**

**Warranty Service:** Please go to the support and service section on our website [www.bkprecision.com](http://www.bkprecision.com) to obtain a RMA #. Return the product in the original packaging with proof of purchase to the address below. Clearly state on the RMA the performance problem and return any leads, probes, connectors and accessories that you are using with the device.

**Non-Warranty Service:** Please go to the support and service section on our website [www.bkprecision.com](http://www.bkprecision.com) to obtain a RMA #. Return the product in the original packaging to the address below. Clearly state on the RMA the performance problem and return any leads, probes, connectors and accessories that you are using with the device. Customers not on an open account must include payment in the form of a money order or credit card. For the most current repair charges please refer to the service and support section on our website.

Return all merchandise to B&K Precision Corp. with pre-paid shipping. The flat-rate repair charge for Non-Warranty Service does not include return shipping. Return shipping to locations in North America is included for Warranty Service. For overnight shipments and non-North American shipping fees please contact B&K Precision Corp.

B&K Precision Corp.
22820 Savi Ranch Parkway
Yorba Linda, CA 92887
[www.bkprecision.com](http://www.bkprecision.com)
714-921-9095

Include with the returned instrument your complete return shipping address, contact name, phone number and description of problem.
LIMITED THREE-YEAR WARRANTY

B&K Precision Corp. warrants to the original purchaser that its products and the component parts thereof, will be free from defects in workmanship and materials for a period of three years from date of purchase.

B&K Precision Corp. will, without charge, repair or replace, at its option, defective product or component parts. Returned product must be accompanied by proof of the purchase date in the form of a sales receipt.

To help us better serve you, please complete the warranty registration for your new instrument via our website www.bkprecision.com

Exclusions: This warranty does not apply in the event of misuse or abuse of the product or as a result of unauthorized alterations or repairs. The warranty is void if the serial number is altered, defaced or removed.

B&K Precision Corp. shall not be liable for any consequential damages, including without limitation damages resulting from loss of use. Some states do not allow limitations of incidental or consequential damages. So the above limitation or exclusion may not apply to you.

This warranty gives you specific rights and you may have other rights, which vary from state-to-state.
